

Complete Learning Management System

OBJECTIVES

- To develop a SaaS application that eases the process of researching, submitting, and publishing research papers for universities and research scholars.
- To provide end-to-end management of students, projects, and research papers by the super admin.
- To create a complete solution for universities and research scholars to manage their research projects and papers.

PROCESS

- Lanware developed a web application and mobile app to cater to the learning management system.
- The web application offers authentication, login, forgot password, reset password, and dashboard features.
- The dashboard allows users to view all the projects added by them.
- The mobile app offers sign-up, verification, and login features.
- Users can create projects by adding mandatory details such as problem statements, project titles, abstracts, images, and videos.
- The admin can review and validate all the projects added by the scholars.

RESULTS DELIVERED

- The client is now equipped with a centralized system for managing research projects and papers, making it easier for universities to review and maintain a record of the research activities by the scholars.
- The user-friendly interface makes it easier for students and faculty members to submit and publish their research papers.
- The end-to-end management of student projects and research papers by the super admin ensures that the whole process runs smoothly and efficiently.
- The SaaS application offers a complete solution for universities and research scholars to manage their research projects and papers.
